(54) VIDEO DELAY CONTROLLER

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a video delay controller without causing any missing or distortion or the like in an identification signal in the case that a video signal on which the identification signal superimposed is delayed and recorded.

SOLUTION: This controller is provided with an identification signal separate means 25 for separating an identification signal superimposed on an input video signal from the video signal, video image delay means 21, 22, 23, 24 for applying digital conversion to the video signal from which the identification signal is separated, delaying the result for a prescribed time, applying analog conversion to the delayed signal and providing an output, and identification signal mixing means 21, 28 for delaying the separated identification signal by the same time as the delay time of the video signal and superimposing the delayed identification signal onto the output video signal of the video delay means 21-24.
